TABLEAU + EXCEL

Presented by: UPAGNA N

The Business Problem

AI adoption is growing — visibility into value must grow with it.

01 Multiple AI tools Recurring subscriptions can spread investment across teams.

02 Cost $\neq$ value A higher subscription cost does not automatically create higher ROI.

03 Decision gap Leaders need one view of cost, value, productivity and ROI.

KEY QUESTION → Which AI tools generate the strongest return, and where should future investment go?

Real Dataset Overview

AI Tools ROI Analytics Architecture

From source data to decision-ready intelligence

Methodology Flow

Seven repeatable steps from raw data to recommendation

Validate → Prepare → Calculate → Visualize → Compare → Recommend

Outcome: a single analytical view of AI spend, generated value, productivity and tool-level performance.

Top ROI: Adobe Firefly • \$186K

Best ROI%: GitHub Copilot • 33.6%

Key Insights & Tech Stack

Turning dashboard evidence into action

01 Value is measurable

AI tools collectively generate substantial financial and productivity value.

02 Cost alone is not enough

Evaluate spend alongside ROI and hours saved.

03 Leaders emerge

Adobe Firefly leads ROI at \$186K; GitHub Copilot leads ROI% at 33.6%.

04 Optimize by segment

Use tool + department views to identify scale, prioritize and review decisions.

Analytics: cost analysis • ROI ranking • department comparison • business intelligence

Conclusion & Future Scope

A practical framework for smarter AI investment

CONCLUSION

- ✓ Built a decision-ready AI Tools ROI dashboard
- ✓ Compared investment with generated value
- ✓ Identified high-performing tools
- ✓ Created a framework for investment optimization

FUTURE SCOPE

- Predictive ROI forecasting
- Department-level ROI optimization
- Usage-based subscription planning
- Real-time data integration
- AI-powered Keep / Upgrade / Review recommendations

AI investment should be measured by the value it creates — not simply by what it costs.
